MRIDUL VERMA R

AI & Devops

Gmail — LinkedIn — GitHub — LeetCode

Summary

Final-year B.Tech student skilled in Java and Python, with experience in building scalable, maintainable software using OOP principles. Proficient in debugging, performance optimization, and clean code practices, with strong collaboration and communication skills. Passionate about solving real-world problems through efficient software development.

Technical Skills

Programming: Python, Java, JavaScript (ES6)
Data Analytics: SQL (MySQL), Pandas, NumPy, Data Cleaning, Data Analysis, Matplotlib, Seaborn
AI/ML: CNN, Transfer Learning, Model Training, Inference Pipelines, Scikit-learn
DevOps & Tools: Git, GitHub, Docker, AWS (EC2, S3, ALB, IAM), CI/CD (AWS CodePipeline, CodeDeploy)
Web (Basic): React.js, Node.js, Express.js, REST APIs

Projects

Farmer AI Assistant – AI-Based Crop Disease Detection & Advisory System Sep 2025 – Nov 2025
GitHub

- Developed a CNN-based image classification system for crop disease detection with optimized preprocessing and augmentation.
- Built a multilingual voice-enabled assistant (Tamil, Hindi, English) for accessible farmer interaction.
- Improved model performance by analyzing predictions and reducing false positives.
- Integrated real-time weather and market data to deliver context-aware crop recommendations.
- Designed an end-to-end pipeline from image input to actionable insights.

Tech Stack: Python, CNN, REST APIs

Career Intelligence Platform – LLM-Driven Analytics & Recommendation System Feb 2026
GitHub

- Built a data-driven career recommendation system using ML models and structured user data.
- Designed a prompt engineering pipeline integrating user profiles, skills, and prediction outputs.
- Developed scalable backend services for real-time query handling and conversational responses.
- Implemented modular architecture separating ML inference from application logic.

Tech Stack: MERN, Python (FastAPI), LLM APIs, MongoDB

Food Delivery System – Scalable Application Deployment & Infrastructure Design Mar 2026 – Present
GitHub

- Deployed a full-stack application focusing on scalability, reliability, and performance.
- Designed containerized services (Docker) for consistent deployment across environments.
- Implemented CI/CD pipelines to automate build, testing, and deployment workflows.
- Architected system for load balancing, fault tolerance, and secure access control.

Tech Stack: Docker, CI/CD, Cloud Infrastructure, Node.js

Experience

AI/ML Developer Intern Oct 2025 – Nov 2025
ShadowFox Erode, India

- Completed end-to-end ML workflows: data collection, preprocessing, model development, evaluation, and production deployment
- Gained hands-on experience transitioning ML models from experimentation to production

Education

B.E. Computer Science & Engineering Aug 2023 – May 2027
Bannari Amman Institute of Technology
CGPA: 8.52

HSLC Aug 2022 – Mar 2023
Carmel Matric Higher Secondary School
Grade: 96.8

Achievements & Certifications

- Oracle AI Foundations Associate (2025)
- Python for Data Science Issued by IBM
- Reliance Foundation Undergraduate Scholar 2023
